

University of Arkansas - Fayetteville Campus Wide Energy Savings Program – Commissioning Services

Project Cost: \$30,000,000+
Completion: June, 2011

In support of the University of Arkansas' Campus Wide Energy Savings Program Pinnacle Energy Services partnered with Energy Systems Group of St. Louis, MO to provide independent third party commissioning to confirm the proper operation of a variety of HVAC systems.

Work included commissioning services on numerous large, complex and sensitive building systems that served, for example, research facilities, high volume commercial cooking operations, a natatorium, two large volume sporting arenas and the largest football stadium in Arkansas. All told, Pinnacle's scope of work on the project covered twenty one buildings on campus representing over 1.6 million SF.

In support of ESG's Performance Contract with the University, Pinnacle provided independent, third party commissioning services that deployed three separate teams across campus.

Utilizing an entirely mobile platform enabled by smart-tablets and cloud-based technology, Pinnacle delivered on-time against an aggressive construction schedule. Each team was also equipped with two-way radios that allowed us to communicate equipment deficiencies in "real-time" to ESG which promptly dispatched sub-contractor teams as needed to meet the schedule.
