

University of Arkansas – Leroy Pond Utility Plant Commissioning Services

Project Budget: \$8.14M
Completion: Est. 2014

Even for large institutions, adding major central plant infrastructure is not a common undertaking and Pinnacle Energy Services is proud to be a part of the new Leroy Pond Utility Plant Project.

As part of our “On-Call” service contract with the University, Pinnacle Energy Services is providing a comprehensive and highly customized set of commissioning services for the University that will include commissioning of the 4000 Ton chiller plant and field-constructed cooling towers (2,000 Ton initial installation).

Working in the context of perhaps the single largest construction and remodeling period in the campus’ history, Pinnacle Energy is a part of a team that continues to coordinate with a variety of other simultaneous projects. These are further challenged with the need to meet all general class schedules as well as campus event schedules such as Wal-Mart’s yearly stockholder’s meeting hosted in Bud Walton Arena.
